

Quality Context: Quality and Compliance Leader

About Quality Context:

Quality Context has an exciting opportunity for an experienced quality professional to join a fast paced, family run contract laboratory and consultancy based in Sheffield.

With our onsite GMP laboratory providing a range of analytical services, a team of consultants working with clients on technical, quality and audit projects across the globe and a production and packaging department managing importation activities for clients, we are looking for a driven, ambitious, enthusiastic and hardworking individual to join the team.

The overall aim at Quality Context is for us to help our clients achieve regulatory compliance, minimise risks and to save money. We work hard to ensure that patient safety is at the forefront of all that we do internally and externally and we do this with a loyal, honest and committed team.

The Opportunity

Our internal quality system covers the GMP elements of the laboratory, importation and secondary packaging activities and the ISO standards for the consultancy. This is a hands on role which requires an individual who is technically knowledgeable about laboratory compliance, who loves problem solving and enjoys working closely with colleagues to drive high standards and achieve goals.

The right candidate will have proven experience of working within a GMP pharmaceutical area, with specific knowledge and experience of an analytical environment as well as having experience of generating QMS documentation such as standard operating procedures, deviations, change controls, out of specification reports, training materials and KPIs.

The right candidate will be able to balance numerous priorities, be incredibly organised and be willing and able to flex and adapt to changing demands of clients and of our business. They will also have impeccable written and communication skills, as well as strong problem solving skills.

Reporting to the Quality Manager and working within a small QA team, this is a role for someone who is either currently working within Quality or who is looking for a move from an analytical based role into quality.

Role and Responsibilities:

- Providing support to the laboratory team, including investigating deviations and out of specifications as well as planning and executing change control activities.
- Managing and executing CAPA actions, which could include writing SOPs and policies, creating forms and templates and conducting in-house training.
- Creating and reviewing Certificate of Analysis.

Technical
Services

- Planning and managing equipment qualification, calibration and maintenance.
- Contributing to the delivery of GMP induction and refresher training and other QMS training as required.
- Generating statistics and KPIs to track and monitor performance.
- Contributing to document management and archiving activities.

Key Skills and Experiences Required:

- Experience of working in a GMP pharmaceutical environment is essential.
- Experience of working in a GMP analytical environment is essential.
- Strong analytical chemistry background.
- Strong communication skills
- Problem solving and negotiating skills.
- Excellent attention to detail.

Preferable Skills and Experiences:

- Experience of a GMP production or warehouse environment.

Values:

We expect people to be passionate about what they do and enjoy coming to work.

We expect people to be hardworking and willing to roll up their sleeves for Quality Context. We need colleagues who we can trust to deliver in their role and who will put in the effort required to contribute to the growth of the overall business.

We expect people to be honest, with themselves and with their colleagues, and we expect loyalty – to their teams and to the wider company.

We care and expect our team members to care too – about our colleagues, about our clients, about the quality and integrity of our work and our relationships.

People at Quality Context work hard, have fun, eat cake, learn a lot and really grow.

The Offer:

This is an office based role, 5 days a week, totalling 37.5 hrs at our office in Sheffield (10 mins from the M1).

We regularly benchmark our salaries to ensure that they are aligned with industry standards. The salary for this position will be dependent upon skills and experience.
